

Perfection in fluids.

The right *flow*  
by German engineering.

# Engineering & Consulting

Complete service from project planning to maintenance

Comprehensive consulting services for your projects

## Full service provider for your requirements!

We offer you a comprehensive service portfolio around your measuring technology:

Starting with the **project planning** and construction, over the **commissioning** and support with the **CE certification** up to the **maintenance** of your test stand we can offer you a comprehensive offer.

To complete our service, our experts are at your disposal for technical as well as analytical questions. Our aim is to provide you with **long-term support** in order to optimize and advance your projects!

### ✓ Project support & construction

We are available to you with our expertise during the project design and planning, the set up and commissioning of your test bench. Whether we are to support you during the entire project or only in certain areas is entirely up to you.

### ✓ Commissioning & CE certification\*

The CE mark documents the fact that systems and test benches meet the health and safety requirements of the European Union. We support you reliably in your CE certification: We examine under which policy your system falls, carry out the necessary tests and measurements, document this, obtained declarations of conformity and affix the CE mark. For more information on this topic, see our data sheet for CE certification.

(\*see also EPE data sheet No. 147177)

### ✓ Maintenance & service

Test benches and other metrological systems need regular maintenance and are also rarely repaired. Our service team ensures that your systems are always in good shape and that downtimes in case of failure are as short as possible.
